

## Intermediate Software Engineer (Frontend)

Snode Technologies specialises in delivering cyber security solutions to customers across the globe utilising our in-house developed advanced threat detection platforms. By ingesting vast amounts of data and applying specifically tailored mathematical algorithms, predictive analytics, and machine learning, Snode empowers customers to defend against cyberattacks in real-time.

The successful candidate will work closely with our Software engineering team and collaborate with our UI/UX team. The front end developer will also be responsible to create innovative solutions, interact with our backend services via various API interfaces, training users on various platforms and help make our software platforms both new and old more visually appealing and enhance usability. Attention to detail both in terms of code and design will be vitally important.
